Introducing the high-speed cyclone type drain separator!
Introducing the high-speed cyclone type drain separator!

**iB-Cyclone**

- **Superior water separation performance**
  - Half the size and over 99% Note drain separation ratio compared to other devices. Note: According to Koganei measurement standards.

- **Cyclone system**
  - **High-speed cyclone** drain separator uses the power of centrifugal separation (patent pending).

- **Maintainability improved**
  - Maintenance free because an element is not used.
  - Select NO type or NC type auto drain.

- **Wide range of flow rates**
  - Excellent water separation performance in a wide range of flow rates.

- **Compatible in a wide range of environments**
  - Specifications for ozone resistance, NCU specifications (copper free) are standard.

**CAUTION** Read the handling instructions and precautions on page 3 before using this product.
User issues

- Having trouble removing drain in piping
- Changing elements and other maintenance is difficult.

Koganei provides solutions to user problems with the iB-Cyclone, which delivers new value and worth to customers.

The iB-Cyclone uses a high-speed cyclonic system to maintain water (drain) separation rates even if the flow is increased. Separation performance is always steady, from small to large flow rates.

8Z-CBK
Always read these precautions carefully before use.

Before selecting and using the products, please read all the Safety Precautions carefully to ensure proper product use. The Safety Precautions described below are to help you use the product safely and correctly, and to prevent injury or damage to you, other people, and assets. Always adhere to the following safety regulations: ISO4414 (Pneumatic fluid power - General rules and safety requirements for systems and their components) and JIS B 8370 (General rules relating to systems).

The directions are ranked according to degree of potential danger or damage: “DANGER!”, “WARNING!”, “CAUTION!”, and “ATTENTION!”

This product was designed and manufactured for use in general industrial machinery.

When selecting and handling equipment, the system designer or another person with sufficient knowledge and experience should always read the Safety Precautions, catalog, User’s Manual and other literature before commencing operation. Improper handling is dangerous.

After reading the Instruction Manual, catalog, and other documentation, always store them in a location that allows easy availability for reference to users of this product.

Whenever transferring or lending the product to another person, always attach the catalog, instruction manual, and other information to the product where they are easily visible in order to ensure that the new user can use the product safely and properly.

The danger, warning and caution items listed under these Safety Precautions do not cover all possible contingencies. Read the catalog and instruction manual carefully, and always keep safety first.

Do not use the product for the purposes listed below:
1. Medical equipment related to maintenance or management of human lives or bodies.
2. Machines or equipment designed for the purpose of moving or transporting people.
3. Critical safety components in mechanical devices. This product has not been planned or designed for purposes that require high levels of safety. Using the product in any of the ways described above creates the risk of loss of human life.

Do not use the product in locations with or near dangerous substances such as flammable or ignitable substances. This product is not explosion-proof. Doing so creates the risk of ignition and fire.

When mounting the product and workpiece, always firmly support and secure them in place. Falling, dropping, or abnormal operation of the product creates the risk of personal injury.

Never attempt to modify the product. Abnormal operation can lead to injury.

Never attempt inappropriate disassembly, assembly, or repair of the product relating to basic construction, or to its performance or functions. This can lead to injury, etc.

While the product is in operation, avoid touching it with your hands or otherwise approaching too close except for specified operations. Also, do not attempt to make any adjustments to internal or attached mechanisms, or to perform any type of adjustment (disconnecting tubes or sealed plugs, adjustment of the product's mounting position, etc.) while the product is in operation.

Falling, dropping, or abnormal operation of the product creates the risk of personal injury.

Because KOGANEI products are designed for use under a wide variety of conditions, decisions concerning conformance with a particular system should be made upon the careful evaluation of a person in charge of system design. Assurances concerning expected system performance and safety are the responsibility of the designer who decides system conformity. Be sure to use the latest catalogs and technical materials to study and evaluate specification details, to consider the possibility of machine breakdown, and to configure a system that ensures fail-safe safety and reliability.

Do not use the product in excess of its specification range. Doing so creates the risk of product breakdown, loss of function, or damage. It could also drastically reduce operating life.

Before supplying air to the device and before starting operation, always conduct a safety check of the area of machine operation. Unintentional supply of air creates the risk of injury due to contact with moving parts.

Do not allow the product to be thrown into fire. Doing so creates the risk of explosion, resulting in the release of toxic gasses.

Do not sit on the product, place your foot on it, or place other objects on it. Doing so creates the risk of injury due to tripping or the product tipping over or falling, resulting in product damage and abnormal, erratic, or runaway operation.

Before conducting maintenance, inspection, repair, replacement, or any other similar procedure, always completely cut off all air connections and confirm that residual pressure inside the product or in piping connected to the product is atmospheric pressure. In particular, be aware that residual air will still be in the compressor or storage tank. The actuator may move abruptly if residual air pressure remains inside the piping, causing injury.

Use safety circuits or create system designs that prevent damage to machinery or injury to personnel when the machine is shut down due to an emergency stop or electrical power failure.

Always check the catalog and other reference materials for correct product piping. Improper piping creates the risk of abnormal operation of the actuator.

When the device not used for long periods (over 30 days), it is possible that the contacting parts may have become stuck leading to slow operation or sudden movements, and it will creates the risk of injury. Check for proper operation a minimum of once every 30 days.

Do not use the product at the beach in direct sunlight, near mercury lamp, or near equipment that generates ozone. Ozone causes rubber components to deteriorate resulting in reduced performance, or a limitation or stop of functions.

Do not use any type of medium that is not specifically stipulated in the specifications. Using a non-specified medium could lead to short term loss of function, sudden degradation of performance, and a reduced operating life.

In initial operations after the equipment has been idle for 48 hours or more, or has been in storage, there is a possibility that contacting parts may have become stuck, resulting in equipment operation delays or in sudden movements. Before these initial operations, always run a test to check that operating performance is normal.
Do not use the product in locations that are subject to direct sunlight (ultraviolet rays), locations with high humidity and temperature, dust, salt, or iron powder. Do not use fluids in the product or use the product in an environment that includes corrosive fluids such as organic solvents, phosphate ester type hydraulic oil, sulfur dioxide, chlorine gas, acids, etc. It could lead to early shutdown of some functions, a sudden degradation of performance, and a reduced operating life. For information about materials, see Major Parts and Materials.

Do not use in locations where there is a heat source nearby or that are subject to radiated heat.

⚠️ **CAUTION**

- When mounting the product, leave room for adequate working space around it. Failure to do so will make it more difficult to conduct daily inspections or maintenance, which could eventually lead to system shutdown or damage to the product.
- Do not scratch, dent, or deform the product by climbing on it using it as a scaffold, or placing objects on top of it. Doing so creates the risk of damage to or breakage of the product, resulting in operational shutdown or degraded performance.
- Always be sure to post an “operation in progress” sign during installation, adjustment, or other operations, to avoid unintended air supply. Unintentional supplying of air can cause sudden operation and may result in injury.
- Use in extremely dry air under temperatures lower than -20 °C [-4 °F] may affect the quality of the lubricating oil used. This creates the risk of degraded performance, loss of function, or other problems.

⚠️ **ATTENTION**

- When considering the possibility of using this product in situations or environments not specifically noted in the Catalog or Instruction Manual, or in applications where safety is an important requirement such as in an aircraft facility, combustion equipment, leisure equipment, safety equipment, and other places where human life or assets may be greatly affected, take adequate safety precautions such as the application with enough margins for ratings and performance or fail-safe measures. Be sure to consult us with such applications.
- Always check the catalog and other reference materials for product piping.
- Use a protective cover and other means to ensure that the operating parts of mechanical devices are isolated and do not come into direct contact with human bodies.
- Do not configure control of the system in a way that could cause workpieces to fall due to power failure. Configure control of the system to prevent workpieces, and other items from falling due to power failure or by emergency stop of mechanical devices.
- When handling the product, wear protective gloves, safety glasses, safety shoes etc.
- When the product can no longer be used or is no longer necessary, dispose of it appropriately as industrial waste.
- Pneumatic equipment can exhibit degraded performance and function over its operating life. Always conduct daily inspections of the pneumatic equipment, and confirm that all requisite system functions are satisfied, to prevent accidents from happening.
- For inquiries about the product, contact your nearest KOGANEI sales office or the KOGANEI overseas group. The addresses and telephone numbers are shown on the back cover of this catalog.

### Warranty and General Disclaimer

1. **Warranty Period**
   - KOGANEI warrants this product for a period of no more than 180 days after it is purchased.

2. **Scope of Warranty and General Disclaimer**
   - **1.** The KOGANEI product warranty covers individual products. When a product purchased from KOGANEI or from an authorized KOGANEI dealer or KOGANEI distributor malfunctions during the warranty period in a way that is found to be attributable to KOGANEI responsibility, KOGANEI will repair or replace the product free of charge. Even if a product is still within the warranty period, its durability is determined by its operation cycles and other factors. Contact your nearest KOGANEI sales office or the KOGANEI overseas group for details.
   - **2.** KOGANEI shall not be held responsible for any losses or for any damage to other machinery caused by breakdown, loss of function, or loss of performance of KOGANEI products.
   - **3.** KOGANEI shall not be held responsible for any losses due to use or storage of the product in a way that is outside of the product specifications prescribed in KOGANEI catalogs and the instruction manual, and/or due to actions that violate the mounting, installation, adjustment, maintenance and other safety precautions.
   - **4.** KOGANEI shall not be held responsible for any losses caused by breakdown of the product due to factors outside the responsibility of KOGANEI, including but not limited to fire, natural disaster, the actions of third parties, and intentional actions or errors by you.
Handling Instructions and Precautions

General Precautions

1. Before performing piping work, thoroughly flush the inside of the pipes with compressed air. Machining chips, sealing tape, rust and other debris getting entered in during piping work may result in lowered performance and functionality or function stoppage.

2. This product cannot be used when the medium or ambient atmosphere includes any of the following substances:
   - Organic solvents, phosphate ester type hydraulic oil, sulfur dioxide, chlorine gas, fluorine gas, ozone, acids, or other corrosive gases.

3. The bowl material is polycarbonate. This product cannot be used in environments with the above gases and fluids, nor threadlocking adhesive, leak detection fluid, hot water or where it may be exposed to them. This product cannot be used in direct ultra-violet light. See page 3 for details.

4. Cover the unit or take other measures when using it in locations where it might be subject to excessive dust, dripping water, dripping oil, etc.

5. Do not exceed the specified volume of water for the product. The water droplets may splash into the secondary side. See page 10 for information about separation characteristics.

6. If mist or condensation forms in the product, it may splash into the secondary side.

Operating environment and medium

- Usable medium
  1. Use cleaned air (filtered to below 40 μm) for the medium. If you are considering using something other than cleaned air, contact the nearest Koganei sales office or overseas department.
  2. Air that is mixed with oil or solids cannot be used.

   Using air that contains oil or solids may cause the product to stop functioning, may lower performance, or shorten the service life.

Mounting and Piping

- CAUTION Air must be free from oil and solids before use.

   No oil or solids allowed!

   Example: Cannot be directly connected to pressure generator

   Screw compressor
   Compressor

   Perform sufficient countermeasures to remove oil and solids from air when using iB-Cyclone.

   If countermeasures are not performed, the performance of the device will fall dramatically, air will leak, and it will not work well.

   CAUTION iB-Cyclone cannot remove humidity.

   Refrigerated air dryer, after cooler, etc.

   Install as close as possible

   Pneumatic equipment, membrane air dryer, etc.

   1. The iB-Cyclone is for removing drain. Steam in pressurized air cannot be removed (dehumidifying cannot be done). Use a membrane air dryer or something on the secondary side if dehumidifying is needed.

   2. Place a device to lower the supplying air from the ambient temperature, by using a refrigerated air dryer or after cooler in the air line so condensation does not occur in the secondary side of piping of the IB-Cyclone. Also, install the iB-Cyclone as close as to the using pneumatic equipment.

1. Install in a location where the air supply and the ambient temperature is under 140 °F.

2. Install vertically so the piping connection portion is up and the drain outlet is down.

3. Allow enough space to easily do maintenance tasks, such as turning the guard button and attaching and removing the bowl.

4. Tighten the mounting ring to less than 2.21 ft-lbf when installing the bracket.

5. Connect the piping so the air flows in the direction of the arrow (flow mark) on the product. The drain removal function will be ineffective if the flow is reversed.

6. Do not place any weight of the product’s piping or apply excessive torque on the product. When tightening the piping, hold the main unit and tighten it to the torque recommended in the diagram below.

   Recommended tightening torque

<table>
<thead>
<tr>
<th>Connecting thread</th>
<th>1/8</th>
<th>1/4</th>
<th>3/8</th>
<th>1/2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Torque</td>
<td>5.2 6.6</td>
<td>8.9 10.3</td>
<td>16.2 17.7</td>
<td>20.7 22.1</td>
</tr>
</tbody>
</table>

7. Large moment and vibration are easily transmitted from steel or non-flexible piping, place a flexible hose between the product and the piping to prevent this from affecting the product.
Periodic maintenance

**Bowl**

1. Do periodic inspections to look for cracks, scratches, or other deterioration in the bowl (clear plastic part).
2. If you find any cracks, scratches, or other deterioration, replace the bowl with a new one, because it may cause a breakdown. See page ❼ for information about ordering bowls.
3. Replace the bowl with a new one if it becomes dirty or the transparency is reduced. To wash the bowl, use diluted household neutral detergent to wash it and then rinse it off with water.
4. Remove and replace the bowl as shown in the diagram below (release all pressure from inside the product before starting work).

**Drain cock**

1. If the volume of drain is greater than that shown in the left side diagram below, the drain removal function is greatly reduced. Be sure to drain before the drain volume reaches the level shown in the left side diagram below. Turn the drain cock with your hand in the case.
2. A tube with an inner diameter of $\phi 0.157$ in. [4mm] can be attached to the drain cock. Make sure the drain cock is closed (locked) before attaching the tube. Do not allow tubing to become severely bent or twisted in the vicinity of the fitting. Lateral force may damage the fitting. Do not point the pipe upward and use a pipe that is under 16.4 ft.
3. If you are using the auto-drain type, the drain that collects on the primary side is flushed all at once. If collected drain exceeds the maximum level in the right of the diagram below, it could lead to a malfunction. Be careful that it does not exceed the maximum level.

**Whirling air components**

1. Dust collecting in the whirling air components reduces the separation function. If this happens, disassemble and wash the product to remove the dust as shown in the diagram below (release all pressure from inside the product before starting work).
2. Use a Seal Kit to replace the o-rings when reassembling the whirling air components. See page ❼ for information about ordering Seal Kits.

**Assembly method**

Reassemble according to the following procedure.

1. Insert the fins into the conical tube and press them in with your hand.
2. Attach a new o-ring (small) to the pass tube.
3. Fit the pass tube to the fins (fit it so it touches the seating of the fins).
4. Replace the two o-rings (large) and connect the conical tube to the main unit.

2. The liquid can be drained manually by turning the drain knob to the left. See page 6 for details.
Handling instructions and Precautions

● Metal cover handling instructions

[Mounting and removing the metal cover]

Use the following procedure to mount the metal cover.
1. Enclose the body of the iB-Cyclone between cover A and cover B as shown by the black arrows in the diagram on the right (the window can face either sides).
2. Tighten the hexagon socket bolts in the 4 locations from the A cover side around 0.74 to 0.88 ft·lbf.

To remove the metal cover, remove the 4 hexagon socket bolts.

Reference data

● About the chemical resistance of polycarbonate

The chemicals in the following table degrade polycarbonate. They may damage the bowl and cause an accident. Do not allow the following chemicals into the compressed air or the environment around the product, do not allow them to contact the product. This does not mean that polycarbonate is chemically resistant to all chemicals not listed below.

Limited Warranty

KOGANEI CORP. warrants its products to be free from defects in material and workmanship subject to the following provisions.

Warranty Period

The warranty period is 180 days from the date of delivery.

Koganei Responsibility

If a defect in material or workmanship is found during the warranty period, KOGANEI CORP. will replace any part proved defective under normal use free of charge and will provide the service necessary to replace such a part.

Limitations

This warranty is in lieu of all other warranties, expressed or implied, and is limited to the original cost of the product and shall not include any transportation fee, the cost of installation or any liability for direct, indirect or consequential damage or delay resulting from the defects.

KOGANEI CORP. shall in no way be liable or responsible for injuries or damage to persons or property arising out of the use or operation of the manufacturer’s product.

This warranty shall be void if the engineered safety devices are removed, made inoperative or not periodically checked for proper functioning.

Any operation beyond the rated capacity, any improper use or application, or any improper installation of the product, or any substitution upon it with parts not furnished or approved by KOGANEI CORP., shall void this warranty.

This warranty covers only such items supplied by KOGANEI CORP. The products of other manufacturers are covered only by such warranties made by those original manufacturers, even though such items may have been included as the components.

The specifications are subject to change without notice.
