## The Pancake® II Direct Interchange Air Cylinders

## Superior Interchangeable Industrial Air Cylinders

**Innovation** – For over 40 years our famous Pancakes® have dominated as the world's first compact air cylinder line. Today, backed by decades of engineering and manufacturing innovation, our new **Pancake® II** composite body air cylinders continue in the Pancake® tradition with a wide selection of models and options.

**Packed with value** – Stainless steel tie bolts and aluminum spacers lock precision machined heads tightly around a unique, high strength, composite cylinder barrel. The barrel's extremely smooth, self-lubricating interior surface insures highly reliable performance and extended seal life. Its high impact resistance reduces chances of cylinder failure due to dings or dents. Zero slip-stick avoids problems that metal cylinders encounter when they sit in a static condition for extended periods of time. Combined with hard chrome plated stainless steel piston rods and a unique, nonmetallic rod bearing, the new Fabco-Air cylinder assembly assures optimal operation and longer product life.

**Exceptional Piston Rod Bearing** – The better the bearing, the more cycle life you can expect from your air cylinders. **Pancake® II** cylinders incorporate a truly superior rod bearing

material - Duralon® with the same field-proven performance you have come to expect from the six other Fabco-Air cylinder families.

Duralon® is a composite of a Teflon®/Dacron® fabric liner bonded to a supporting filament-wound, high strength, fiberglass and epoxy resin shell. Resistant to corrosion, moisture and temperature to 325°F, the bearing is reliable in any environment. It has an extremely high load bearing capacity, very low friction, and will not gall or score the piston rod (see physical properties in the table above).

### Mounting

Leave blank for standard counterbored mounting holes (see page 6) in the basic model. For other mounting specify only one option code.

- CB - Screw head clearance holes, both ends<sup>1</sup>
- CF - Screw head clearance holes, front<sup>1</sup>
- CR - Screw head clearance holes, rear<sup>1</sup>
- F - Nose mount (all except double rod models)<sup>2</sup>
- HB - Threaded mounting holes, both ends
- HF - Threaded mounting holes, front
- HR - Threaded mounting holes, rear
- PM - Pivot mount, pin 90° from port
- SM - Pivot mount, pin in-line with port
- TB - Trunnion mount, both ends<sup>3</sup>
- TF - Trunnion mount, front<sup>3</sup>
- TR - Trunnion mount, rear<sup>3</sup>

- <sup>1</sup> "Screw head clearance" to allow bolt head to pass through; No counter bores (see page 8)  
<sup>2</sup> Includes heavy duty rear head and rod wiper  
<sup>3</sup> Not available in 1/2" bore.

### How to Order

1. Specify **P**, Model, Action, and Bore
2. Specify optional Mounting (if required), then Stroke
3. Specify the Options in alphabetical order

Ordering example #1: **PTD4-HF2.500-TCFV**

**Pancake® II** with double rod hole thru, double acting, 1-1/2" bore, front threaded mounting holes, 2-1/2" stroke, coarse female rod thread, and Viton seals.

Ordering example #2: **PSD3-1.000**

**Pancake® II** with single rod, double acting, 1-1/16" bore, standard counterbored mounting holes and 1" stroke.

### Options   *Enter in alphabetical order*

- B - Bumpers, both ends<sup>1</sup>
- BF - Bumper, front only<sup>1</sup>
- BR - Bumper, rear only<sup>1</sup>
- E - Magnet on piston for position sensing (see length adders page 9) 3/8" stroke minimum<sup>2</sup>
- H - Heavy duty rear head (see length adder page 9)
- J - Failsafe operation (single acting, spring retract models)<sup>3</sup>
- L - Low friction seals (see length adders page 9)
- M, M1, M3, M4 - Magnet on piston and adhesive mounted dovetail extrusion to hold 1/4" dovetail sensors. (see sensors page 23; length adders page 9) 3/8" stroke min.<sup>2</sup>
- P2, P3, P4 - Front port position other than standard<sup>4</sup>
- Q - Low temperature operation (-40°F to +200°F)
- TCF - Coarse female rod thread, dimension E (page 7)
- TCM - Male rod end with coarse thread (page 8)
- TFM - Male rod end with fine thread (page 8)
- TN - Non-threaded rod
- T1, T3, T4 - Additional adhesive mounted dovetail extrusions located in position 1, 3, or 4
- V - Viton seals for media compatibility (-15°F to +221°F)
- W - Rod wiper, Buna N only (page 8)
- X - **EXTRA** rod extension  
Example: X0.5 = 1/2" **EXTRA** Rod Extension  
X1 = 1" **EXTRA** Rod Extension

- <sup>1</sup> Stroke is reduced by .03 per end; .06 for option B; Spring retracted, BR only; Spring extended, BF only.  
<sup>2</sup> Not available with Viton seals or low temperature seals.  
<sup>3</sup> Not available in 1/2" bore.  
<sup>4</sup> P2 and P4 not available in 1/2" bore.

### Deviations from Standard Dimensions (Options L, H, E, M)

‡ Heavy duty rear head is recommended for applications where the cylinder is mounted on the front face or trunnion-mounted, and impact loading (20 or more cycles/minute) occurs between the piston and rear head. It increases the overall length of the cylinder as shown.

† A minimum stroke of 3/8" is required to sense end-of-stroke positions. For low friction seals used in conjunction with magnetic position sensing, use "E" or "M" length adder only.

# Pancake® II Cylinders

## Nonrotating, double acting 4 Bore sizes 3/4" thru 2" Strokes to 4" standard

Twin piston rods are incorporated into the cylinder head to achieve NON-ROTATION. The rods are securely fastened to the piston and tied together externally by a rod end tool bar. The tool bar insures that the rods move in tandem and provides an ideal mounting surface for any attachments required by your application. The tool bar is furnished with threaded mounting holes or optional counter-bored mounting holes.

### Allowable Torsion Load and Rotational Tolerance

Side loading should be avoided for any cylinder application. The smaller diameter twin rods will have more deflection due to side load than the one standard rod in a comparable **Pancake® II** cylinder. However, the PND Series is designed to work satisfactorily against pure torsional loads. Maximum torsional load per bore size is shown in the following table.

Approximate Angular Deflection (Degrees) due to max. torsional load							
Bore	Torsional Load Max.	Stroke					
		0 to 1-1/2	2	2-1/2	3	3-1/2	4

## How it Works

PA Series shown

Fabco-Air attaches multiple pistons to a common shaft and provides internal air passages through the shaft to all pistons. When air pressure is applied to the extend port, all pistons are pressurized simultaneously, enabling tremendous thrust forces to be obtained. (See the handy cylinder sizing guide below for the force multiplying factors.) When air pressure is applied to the retract port only one piston is pressurized.

NOTE: 1) Series PB is made with multiple retract and single extend cylinder action for applications requiring high pulling force. See "How to Order" and "Sizing Guide".

2) Additional retract stages are offered in the PA Series (multiple extend and single retract) with the use of ported baffles. Contact engineering for application and information. Add 0.50" length to dimension B\* for each ported baffle. See "Options" R2, R3, R4 listed on page 15.

**Double acting, single rod end cylinders multiply force output. 3 Bore sizes 2-1/2" thru 4". Strokes to 4" standard.**

**Extend Port - Air supplied to all pistons**

**Retract Port - Air supplied to front piston only**

- PM - Pivot mount, pin 90° from port
- SM - Pivot mount, pin in-line with port

<sup>1</sup> "Screw head clearance" to allow bolt head to pass through; No counter bores (see page 21)

Options Enter in alphabetical order

- E - Magnet on rod end piston for position sensing (see length adders page 20) 3/8" stroke minimum<sup>1</sup>
- L - Low friction seals (see length adders page 20)
- M, M1, M3, M4 - Magnet on piston and adhesive mounted dovetail extrusion to hold 1/4" dovetail sensors. (see sensors page 23; length adders page 20) 3/8" stroke min.<sup>1</sup>
- P2, P3, P4 - Front port position other than standard (page 20)<sup>2</sup>
- P6, P7, P8 - Rear port position other than standard (page 20)<sup>2</sup>
- Q - Low temperature operation (-40°F to +200°F)
- TCF - Coarse female rod thread, dimension E (page 20)
- TCM - Male rod end with coarse thread (page 20)
- TFM - Male rod end with fine thread (page 20)
- TN - Non-threaded rod
- T1, T3, T4 - Additional adhesive mounted dovetail extrusions located in position 1, 3, or 4
- V - Viton seals for media compatibility (-15°F to +221°F)
- W - Rod wiper, Buna N only (page 20)
- X - EXTRA rod extension  
Example: X0.5 = 1/2" EXTRA Rod Extension  
X1 = 1" EXTRA Rod Extension

<sup>1</sup> Not available with Viton seals or low temperature seals.  
<sup>2</sup> P2, P4, P6 and P8 not available in 1/2" bore.

### How to Order

1. Specify P, Model, Action and Bore
2. Specify optional Mounting (if required), then Stroke
3. Specify the Options desired

Ordering example: **P3D5-CR0.375/2.000-TCM**

This model number specifies a 3-position, double acting cylinder, 2" bore, screw clearance holes at rear, 3/8" stroke A, 2" stroke B, and male rod end with coarse thread.

## Sensor Specifications & Ordering Information

- Encased in a plastic housing, dovetail style electronic sensors are corrosion resistant. 60° wire outlet allows close mounting.
- Two methods of mounting are available:
  - Tie bolt spacer mounted clamps (Option -E)
  - Adhesive mounted dovetail extrusions (Option -M)
- Order sensors separately from the table below**

### Option -E Magnet on piston – use spacer mounted clamps

To apply dovetail style sensors first locate clamp in rough position on any of the tie bolt spacers or tie rods and lock it in place with the set screw.

Next, make fine adjustment by sliding the sensor within the clamp and lock in place with its set screw.

### Option -M Magnet on piston and adhesive mounted dovetail extrusions

Specify Option M for mounting rail(s) located in standard position(2).

Specify option M1, M3, or M4 for mounting rail in alternate positions 1, 3, or 4 respectively. Additional dovetail rails may be applied by specifying options T1, T3, or T4.

The design and construction of the **Pan-cake II** allows the cylinder barrel to float approximately 0.020 axially. It can also rotate slightly. The axial movement will be more noticeable than the rotational movement during cylinder cycling and may present what appears to be sensor

malfunction when using the extruded dovetail rail. Thus, for extremely precise sensor applications where this may be troublesome, it is recommended to use the spacer-mounted clamps shown above in the -E option to provide a more stable and rigid sensor mount.
