Vacuum Pump Exhaust Mufflers

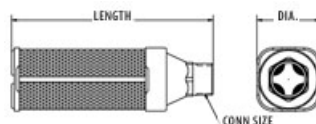

Single Chamber-Male 1/8" - 2"

Single Chamber-Female 1/8" - 2"

Multi-Chamber-Male 3" - 6"

Special Applications

For quiet and efficient pump performance

- Muffles the distracting noise of vacuum pump exhausts
- Noise reduction achieved by an obstruction-free expansion chamber that reduces exhaust air velocity and softly disperses it throughout the muffler's large disseminator surface area without impeding pump performance
- Recommended for applications where quiet and efficient pump performance is critical, such as suction apparatuses, vacuum frames, checks, simulation chambers, and transfer and control devices
- Recommended for pressures up to 125 psi (8.6 Bar)
